## Card Security Code

The card security code is a special code feature of your credit card to provide added security for your transaction. It is a 3 or 4 digit number which is not part of your credit card number. It appears only on your credit card and provides some assurance the card is in your possession.

Discover®, MasterCard® and Visa® have the code in the <u>last 3 digits of the number printed on the back</u> of the card in the signature field (see example below on the left).

American Express® has <u>4 digits printed on the front</u> of the credit card on the right side above the imprinted card number (see example below on the right).

See the security code on the sample cards.
